

[TOKEN NAME & SYMBOL TBD]

Hello, I am Chillieman.

This is an ERC-20 Implementation that has one purpose – To give gifts to lucky winners! I'm going to be as transparent as I possibly can!

Chillie Notes:

- This token will have no use other than providing gifts through GiveAways and Airdrops.
- I Intend to do these AirDrops as long as possible, if there is Trading Volume on this token – There will be Airdrops!

Tokenomics:

1. There will be a total supply of 1 Trillion Tokens (1,000,000,000,000)
2. 80% of the total supply will be listed on UniSwap as a Public Sale.
3. All Liquidity Generated by me or the Token will be sent to the Token Address, where they can never be retrieved.
4. 20% of the total supply will be reserved for 4 separate Airdrops (5% each) – These Tokens will be locked into the Token Contract (Not sent to Chillieman)
5. The first batch of AirDrops will be provided after the Public Sale, and the AirDrop network fees will be paid using the Team Taxes collected by the Token Contract.
6. The Token will collect a total of 3% taxes of every Transfer.
 - a. 1% will be reserved for Giveaways and AirDrops.
 - b. 1% will be reserved for Team Expenses.
 - c. 1% will be reserved for the purpose of automatically generating Liquidity.

Token Distribution

■ Airdrop 1 ■ Airdrop 2 ■ Airdrop 3 ■ Airdrop 4 ■ Public Sale

Total Taxes:

A total of 3% of every transfer will be reserved and used to grow this project, rationale is Explained Below:

1% for Giveaways and AirDrops?

The Whole point of this Token is to provide AirDrops and Giveaways. I'm not just going to stop giving once the initial 20% of Tokens are AirDropped.

Every Single Transfer of the token will reserve 1% of the transaction Value. This will be kept by the Token Contract and will be gifted to someone (or many people) via a Giveaway.

1% for Liquidity?

This token collects 1% of all transfers to be used to automatically generate new Liquidity in UniSwap. Once the Liquidity Tax Fund reaches 0.5% of the total supply, those tokens will be sold to UniSwap, and all ETH received will be added back to Uniswap as Liquidity. Liquidity that is generated by this process will be received by the Token Contract and can never be removed.

1% for Team Expenses?

AirDrops are expensive! At a Gas Price of 50 gwei, It can easily cost 0.5 ETH (Around \$1,000 USD at the time of this writing) to provide an Airdrop to 500 wallets.

Every Single Transfer of the token will reserve 1% of the transaction Value for the purposes of Team Expenses. This will be kept by the Token Contract and can be withdrawn by me, Chillieman, at any time.

These Team Taxes will be used to pay the ETH Network Fees to fulfill Giveaways. I will also need to have funds to pay others to help me with Marketing, Community Management, Exchange Listings, etc.

Giveaways

The token contains a function, giveawayGenerationalWealth, to Gift ALL the current GiveawayTaxes to a single Wallet. Enjoy Generational wealth!

AirDrops

There are two Functions that can be called to process AirDrops.

1. AirDropInitialSupply – Used to send out 5% of initial supply. (Will be used exactly 4 times)
2. AirDropGiveawayTaxes – Used to send out ALL Giveaway Taxes to a list of addresses.

How Will Recipients be Chosen?

1. The first Batch of AirDrop Recipients will be a gift to some of the nicest people on Twitter who have supported me since I started hosting ETH giveaways in February. Anyone who commented on this post is included in the First Batch of Airdrops:
<https://twitter.com/Chillieman1/status/1660166715718750208>
2. The Second Batch of Recipients will be distributed in the following post. Up to 500 wallets will be selected from this Post:
<https://twitter.com/Chillieman1/status/1661157611012538368>
3. TBD
4. TBD
